Learning Toxicology through Open Educational Resources (TOX-OER) is a joint project of six European universities (Salamanca, Spain; Bologna, Italy; Porto, Portugal; Transylvania, Romania; South-Eastern, Finland); Charles University, Czech Republic) and one research institute (Space Research and Technology, Bulgaria) implemented under the Erasmus+ Program. The aim was to develop educational materials freely available in the virtual space in the form of MOOC (Massive Open Online Course). The MOOC platform contains 7 different modules covering key areas of toxicology, i.e. general toxicology including toxicokinetics, medical, occupational, environmental and regulatory toxicology. Educational texts, videos and self-controlling tests are available in English and in the languages of all seven participating countries. Courses are aimed at a wide audience including professionals in the field related to toxicology and anyone wanting to

gain better understanding of the effects of chemicals (including drugs) to humans and the environment. For more details see <https://toxoe.com/>

Supported by the European project 2015-1-ES01-KA203-015957.
